Information Regarding Your Upcoming Surgery

You are scheduled for surgery with Dr. Stephen Hoenig.

Your surgery is scheduled for _____.

In preparation for your surgery, you may need to see other healthcare specialists such as a cardiologist for evaluation prior to surgery. If so, please schedule as advised or we will schedule these appointments for you.

1-2 weeks before your surgery, you will need to speak with a surgical nurse in the Surgical Pretesting Office. They will contact you via telephone for an initial interview or may request you come to the hospital to review your medical and surgical histories and determine if you need any additional testing such as labwork, EKG or chest x-ray prior to surgery. Staff from Dr. Hoenig's office will contact you with the date and time of your interview.

Once you have completed your interview and any pre-operative testing needed, you will be given a date and time to call the surgical nurse to find out what time you need to arrive on the date of your surgery. She/he will give you any additional information that you need at that time, such as what entrance to use and where to go once you arrive at the hospital the day of your surgery.

There may be medications that need to be stopped prior to surgery. You will be informed of these changes by the surgical nurse at the time of your pretesting interview.

In preparation for your surgery you cannot have anything to eat or drink after midnight the night before your surgery. The surgical nurse will inform you of any medications that you may take the morning of your surgery with a small sip of water.

Please feel free to contact the office at 978-534-3399 at any time prior to your surgery if you have any questions.
